

ABSTRACT OF THE DISCLOSURE

A rolling pig pipeline cleaning apparatus (10) including a pig conveyor unit (11) including a base member (20) having a plurality of vertical support columns (21) (21') etc., each provided with support arms (23) (23') etc., that support opposed pairs of
5 guide rails (24) (24') that form a pathway for a plurality of gravity fed pigs (25) to an indexing arrangement (28) that delivers the pigs (25) in a sequential fashion to a pig catching chamber (30) that forms a portion of a high pressure delivery unit (12) that also includes a pig pushing ram (32) for moving a pig (25) from the pig catching
10 chamber (30) into a high pressure chamber (34) wherein, pressurized gas from a pressure generating cylinder (35) forces the pig (25) from the high pressure chamber (34) into a pig feeding tube (33).
